

REQUIRED STAIR RAILING INFORMATION

Find and complete the stairway (or stairways) that fit your home and send in with your deck drawings for a free quote.

Stairway with diagonal rail length of 8'0" or less, no intermediate post is needed.

The stair rail sections will not have tenon ends.

These sections will be field trimmed and secured to your post with screws.

Rail sections required for 1 side 2 sides

Please provide us with one riser and one run measurement from your stringer, as if there is no tread or riser board on your stairway. This will allow us to calculate your stair angle.

Riser _____"

Run _____"

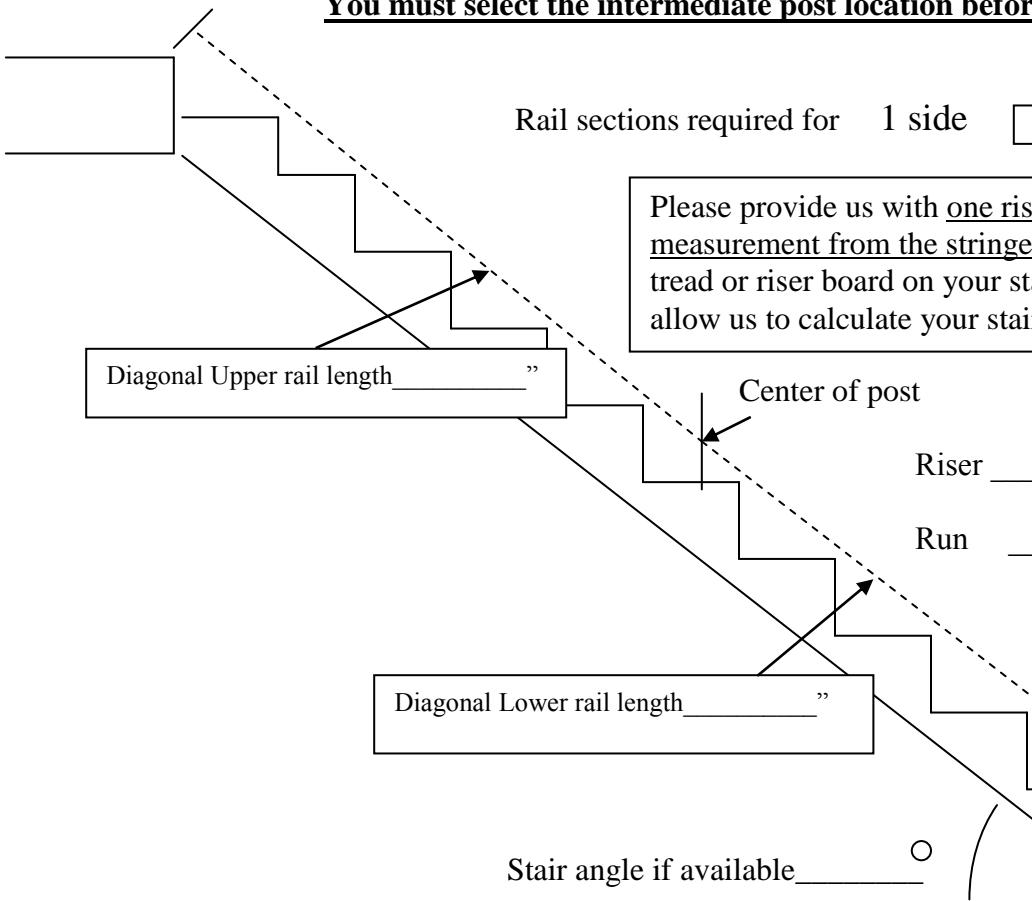

Select Post Type:

Flush Mount Post

Shoulder Mount Post

Stairway with diagonal rail length greater than 8'0" requires an intermediate post.

You must select the intermediate post location before measuring rail lengths.

Rail sections required for 1 side 2 sides

Please provide us with one riser and one run measurement from the stringer, as if there is no tread or riser board on your stairway. This will allow us to calculate your stair angle.
